U.S. Serial No. 09/806,676 Version with Markings Showing Changes Hade

(Aucnded).

1 A device for automatically compensating for the imbalance of the rotor (4, 5) of a centrifuge with a compensating ring (8), which can be supported concentrically in the resting position over an elastic bearing device at a concentric surface of the rotor. wherein the bearing device is constructed as an elastic ring (9,19), which yields at least radially.

2. The device of claim 1 with a rotor (4, 5) having a drive shaft (4), wherein the device (8, 9) is constructed to be mounted on the outer surface of the shaft

(Quended).

3. The device of claim 1 with a rotor (4, 5) having a drive shaft (4),

wherein the device (8, 9) is constructed to be mounted on the inner surface of the shaft zotor [4] [4,5].

- 4. The device of claim 1, wherein the elastic ring is constructed as an elastomeric ring (9).
- 5. The device of claim 4, wherein the elastomeric ring is constructed of several layers (9', 9") with different elastomeric properties

电多数电路电子 医人名英克特尼兰

6. The device of claim 1, wherein a seating rang (11), constructed for being mounted on the surface of the rotor, is provided on the sale of the elastic rang (9, adjoining) living on the surface of the rotor (4, 5).

- 7. The device of claim 1, wherein the parts (8, 9, 11, 8, 19, 11) of the device are permanently connected with one another
- 8. The device of claim 4, wherein the elastomeric ring (9; 9', 9") consists at least partially of an elastomeric foam.
- 9. The device of claim 1, wherein the elastic ring is constructed as an annular helical spring (19) with convolutions extending obliquely to the radial direction.
